

Animora's AI issues.

1. When prompted, takes too long to respond, and goes unresponsive for 10 minutes.

2. When responding it builds only a grey plane and always after building the plane,

It says 'animora/blender has timed out. Try a different approach.' This happened after all fresh prompts were given to the ai.

3. when restarted again, it is prompted and takes too long, approximately 10 mins before building something to render it, then it says timed out.

4. when restarted the third time and prompted, it builds very simple rough sketches with only pink colour of low quality and tells me, timed out. It guides me on how I will restart 'animora/blender' on windows and in macos. It tells me once restarted I tell it go and it will build it.

5. After restarting and prompting, 'go' it build a better model than before but the change is minimal. It says time out and restart again and prompt 'go' or it says try another approach.

6. when you tell it try another approach, it gives you the plan to choose, or it uses default.

When you choose it says time out and the prompt is too heavy for it to handle, use another approach. When you tell it to use another approach, it says the same thing.

NOTE: Every time before I prompt it, Animora goes unresponsive for almost 10 minutes, and before it gives me feedback, it also goes unresponsive or takes too long when composing. ALL the creations are ugly and basic. It refers animora's AI as 'animora/blender' or when it tells me to restart it tells me to restart a new blender file, instead of telling me to launch animora again.

When any 3d model is twisted or changed it's angle, it breaks the rendering completely and starts rendering again to give clear image.
